HOME HEALTHCARE

Home Healthcare

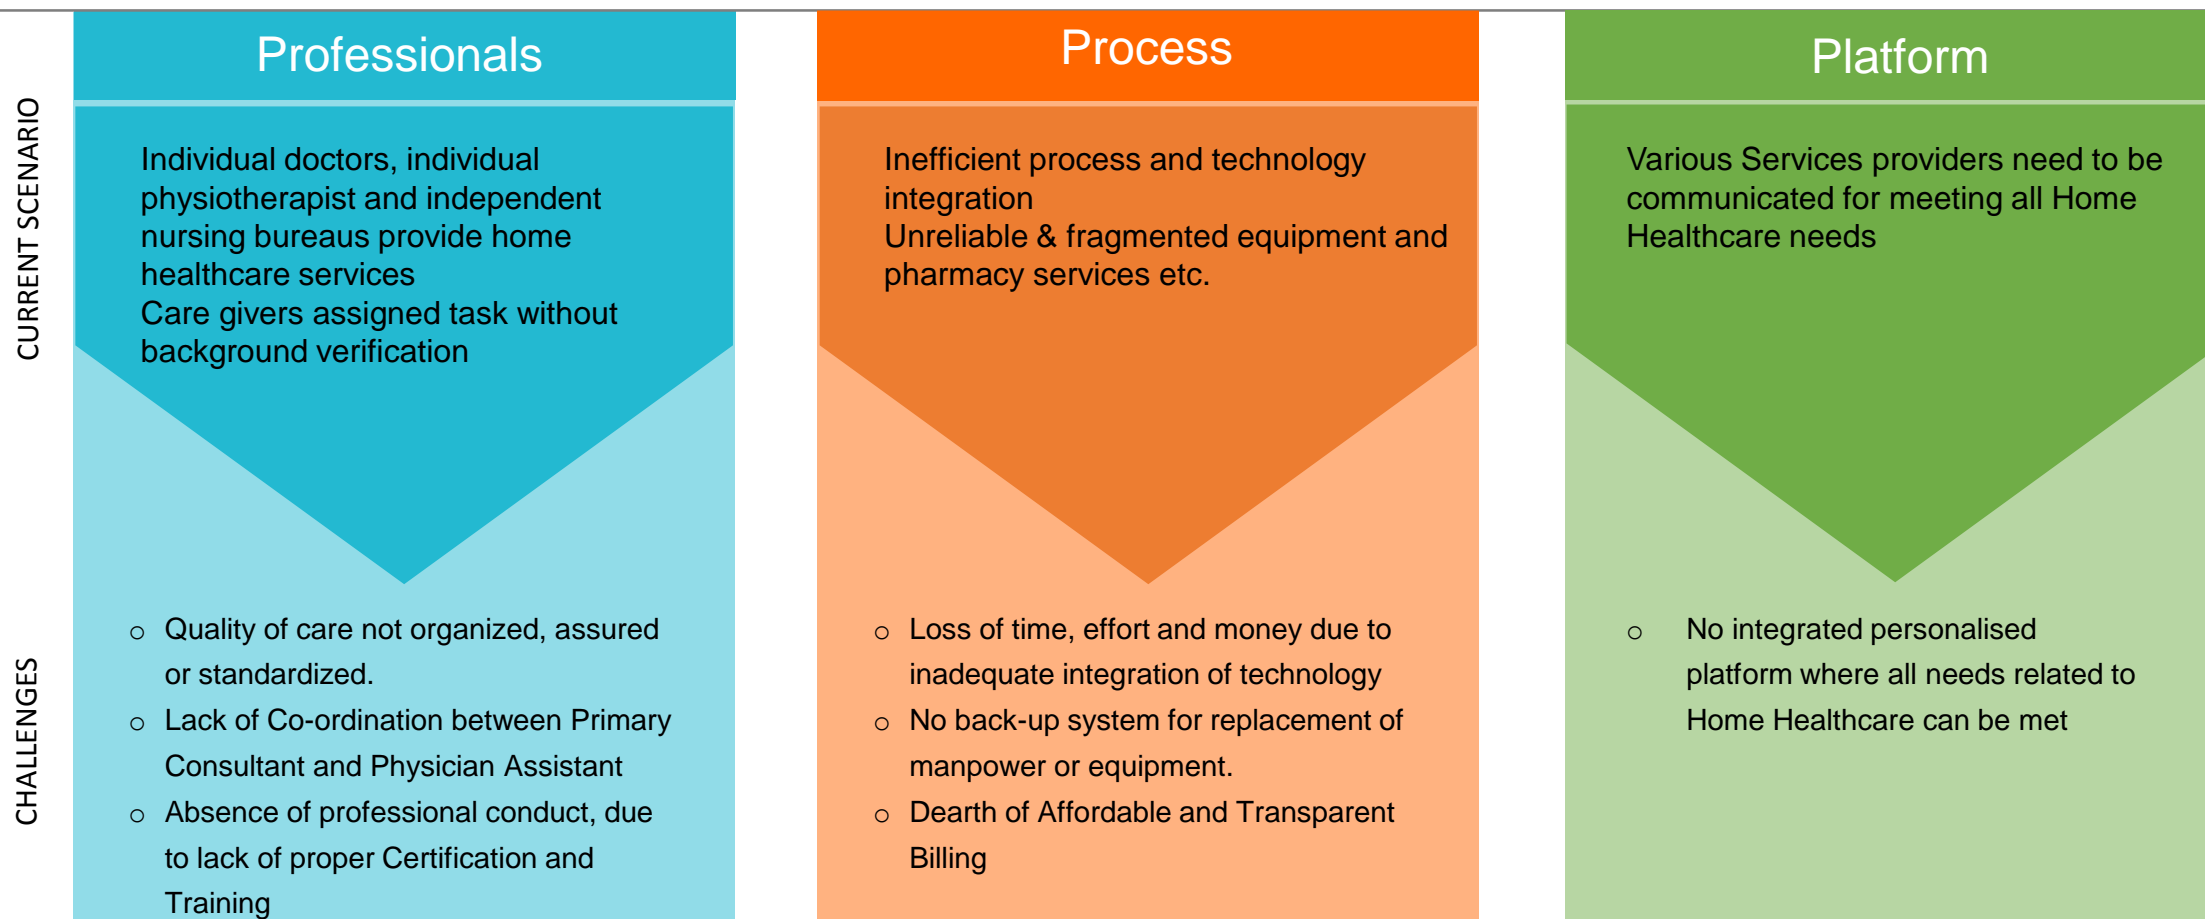

Home healthcare has evolved around the idea of co-existing with hospital and consultants for a patient who is ill enough to need additional health care, but stable enough to be discharged from the hospital. This typically requires either physician, nurse or trained caregivers in the home who can administer infusions, do basic rehabilitation exercises, provide respiratory therapy, and other moderately invasive procedures, up to and including hospice care. Home Healthcare is gaining in popularity due to the growing trend of less stay at the hospital.

Today home health care may be considered for patients who are:

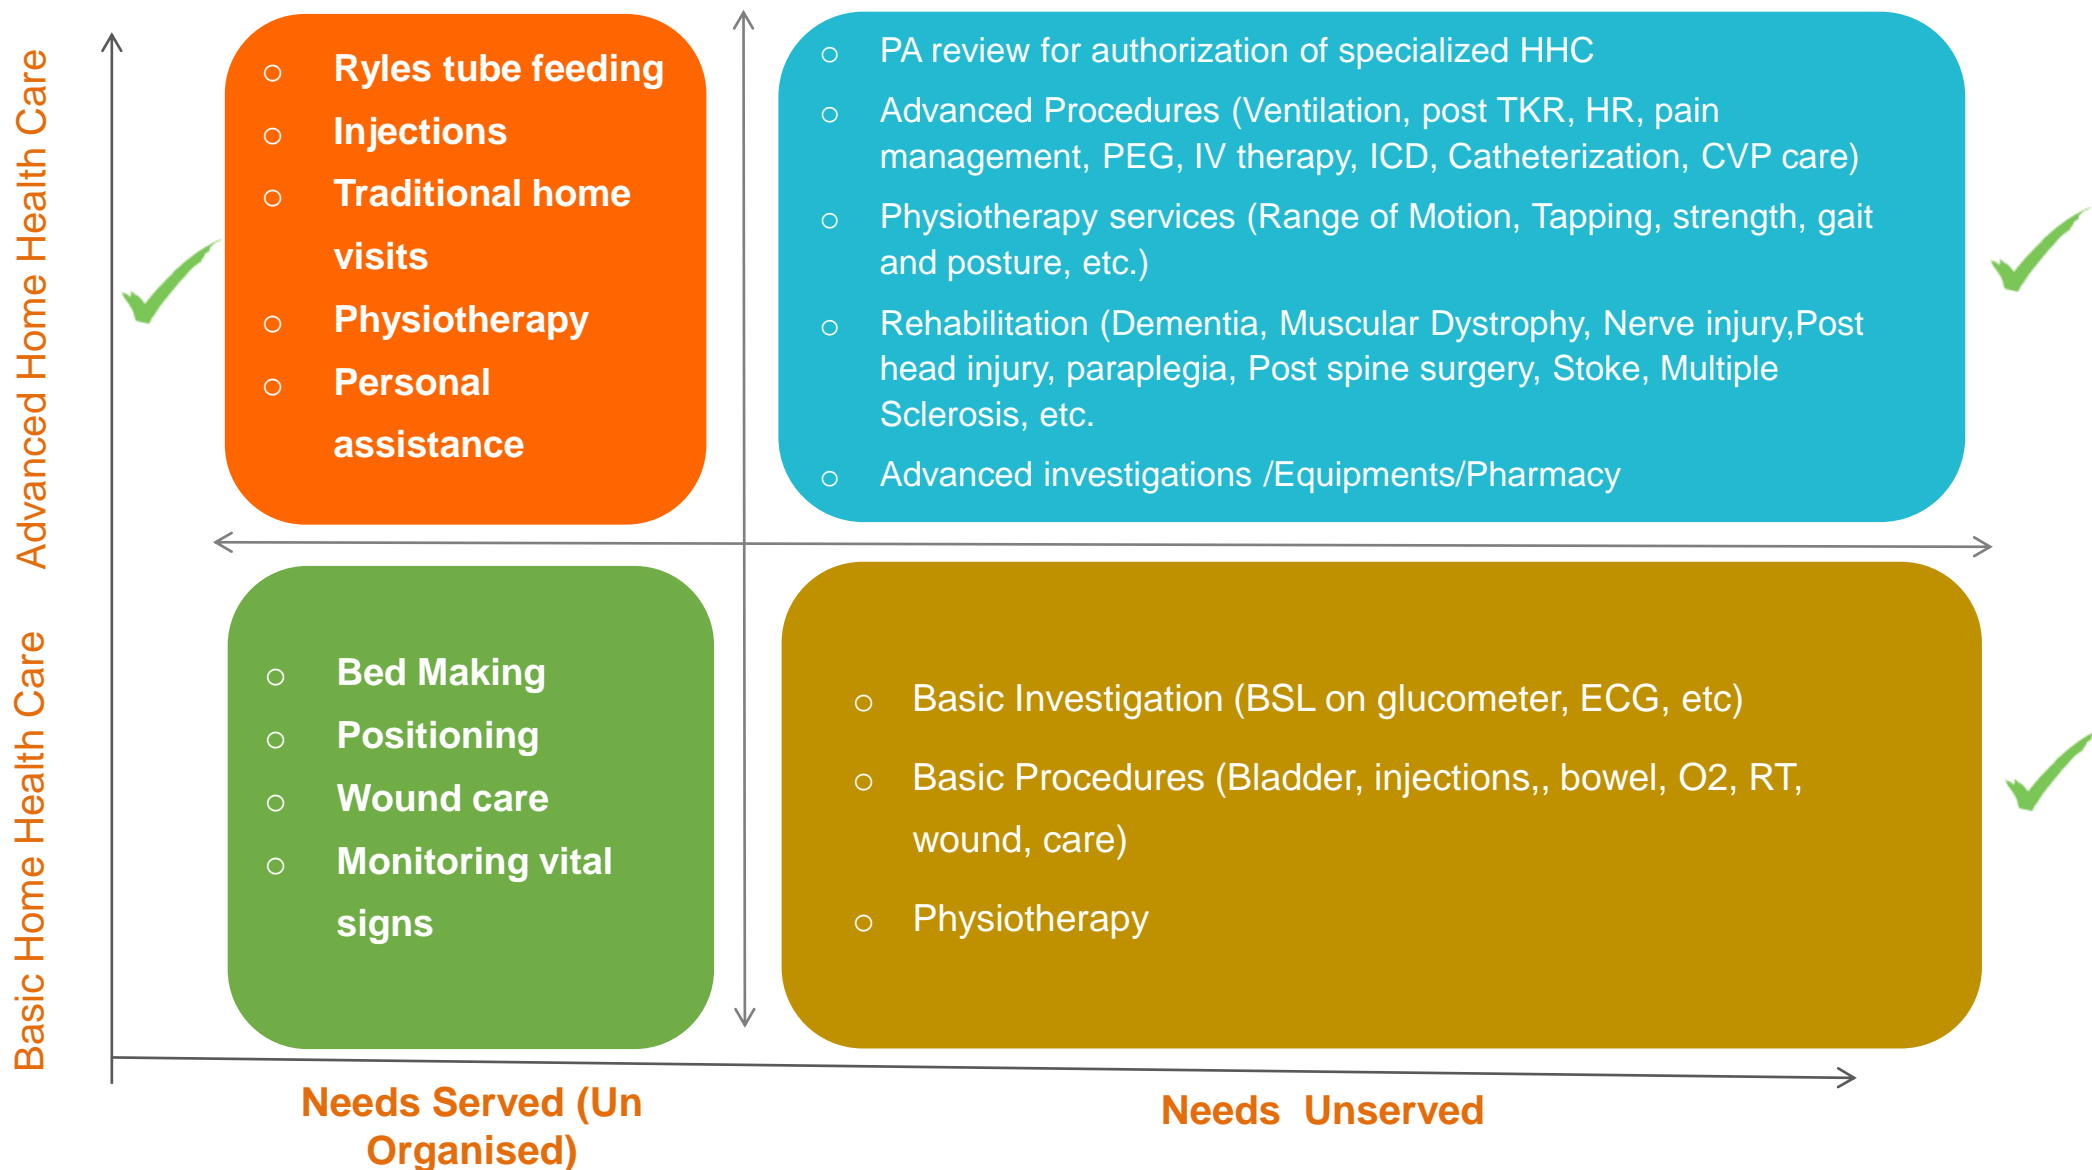

- Recovering from an illness
- Undergoing treatment
- Disabled
- Chronically ill
- Terminally ill

Home health providers deliver high quality and personalized care to patients – utilizing the latest technologies and innovations the industry has to offer. A team – the caregiver, friends, family, home health care provider and physician – works together to provide a holistic approach to health care, which provides better health outcomes for the patient and saves their cost & efforts.

Challenging Status-Quo

Concerns we Address

Services

Primary Services:

- Geriatric/Elderly/Child Care
- Post-operative care
- Palliative care
- Primary care & Physiotherapy Services

Value Added Services:

- Collection of Lab samples
